

Wire Suspension Sets

Products in the Clearvision Suspended product range are supplied with wire suspension kits as standard. Products within the Surface/Suspended product range are usually not supplied with suspension kits and unless stated these must be ordered as accessories. Please refer to individual product pages for more information.

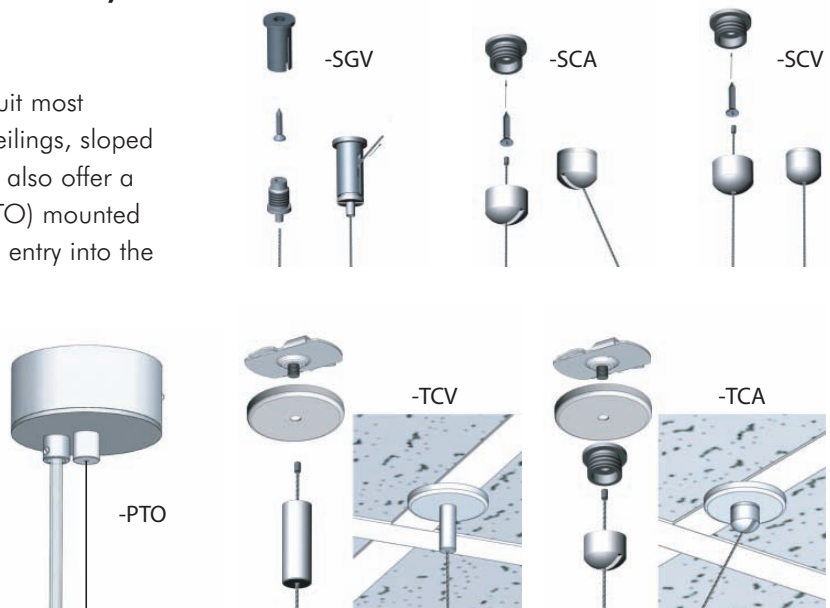

Suspension kits are supplied in 3 sections;

Ceiling Fix*

These are available in various forms to suit most exposed T-grid, plasterboard and solid ceilings, sloped ceilings can also be accommodated. We also offer a range of recessed (-PTR) and surface (-PTO) mounted power take-offs for secure and tidy cable entry into the ceiling void.

Solid/Plasterboard Ceilings
-SGV (top wire adjustment)
-SCV (vertical mounting)
-SCA (angled mounting)

T-Grid Ceilings
-TCV (vertical mounting)
-TCA (angled mounting)

*Due to the range of top fix options available, we recommend that the ceiling type should be specified on any order placed for luminaires requiring suspension kits.

Suspension Wire

Suspension wire is of 1mm diameter stainless-steel stranded type, usually supplied in lengths of 1m to allow a nominal suspension drop of 0.5m (0.7m max). Other lengths can be requested, should longer drops be required.

Luminaire Fix

Dependant on the luminaire design, either a 2-point or a 4-point kit will be required. These are usually secured within the luminaire via a screw/nut and washer.

Luminaire fix kit types are standardised by product and do not require specification. Examples are;
